Future of **E-physiotherapy**

Created by physiotherapists for patients

Musculoskeletal pain is a disease of 21st century

There was no universal method of examining painful musculoskeletal dysfunctions. Its lack lowers effectiveness of therapy and hinders specialists' collaboration.

For the needs of our patients and ourselves, specialists, we have created...

**World's first remote, automated digital system
for analysis and therapy of MSK dysfunctions**

**Musculoskeletal disorders are a growing global
problem and need a global solution**

SPINETIME
index

User's tool

REHApp

What does a patient do when they experience sudden or chronic back pain?

What are the difficulties for your doctor or physiotherapist?

- They would like to develop effective therapy, but there is no tool or universal procedures to analyse MSK pain in the doctor's office.
- They would like to have access to a tool that would determine the patient's condition before the visit begins.
- In some EU countries, it is mandatory to prepare a report before starting treatment. But often there is no time for this.
- Such a report from the analysis of the patient's condition is paid by the National Health Funds. Automating the examination is a **pure time and financial gain** for the specialist.

SPINETIME
solutions

SpineTime solution gives you at your disposal:

SpineTime INDEX-based diagnosis of dysfunction, available immediately to physicians and physiotherapists

Self-examination

Diagnosis

Medical documentation

Therapeutic protocol

Smart algorithm

Dynamic model linking 3 direction of vertebrae movement for cervical, thoracic and lumbar spine.

Diagnostic module

Using smartphone or tablet, patient answers simple questions and makes few easy movements, creating SpineTime index.

PRO module

Mobile application for a doctor or physiotherapist. It allows you to read the results of the patient's self-analysis, edit and invoice the procedure.

Patient module

Application for the patient. It allows you to carry out an analysis, gives access to personalized therapy and dedicated orthopaedic supplies (E-commerce).

Doctor & physiotherapist

Doctor & physiotherapist working with the patient on a daily basis have the ability to track the progress of the therapy, only with patient's permission.

A smartphone with REHApp PRO installed

is enough to give the specialist immediate access to quantified results of the analysis of musculoskeletal dysfunction. It allows you to edit and comment on the submitted documentation. Allows you to add images, e.g. a doctor's referral, a description of a radiographic examination, etc.

SPINETIME
solutions

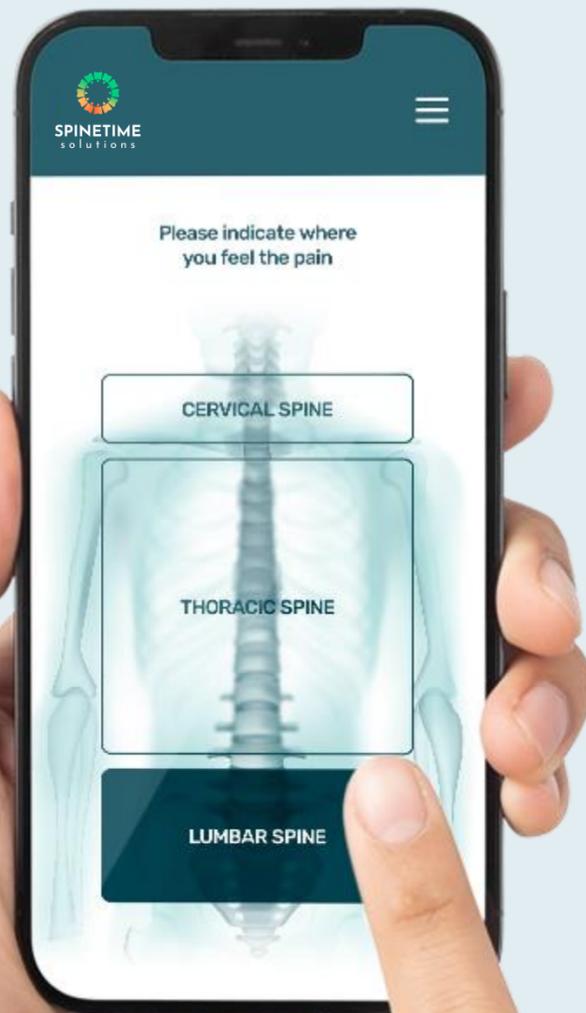

A smartphone with Patient REHApp installed

is enough to

- give the patient the opportunity to perform an analysis of **musculoskeletal dysfunction** without the need for the presence of a specialist.
- It allows you to securely send results to a doctor/physiotherapist of your choice.
- Thanks to the created patient account, he receives access to individual, paid therapeutic solutions (adapted physiotherapeutic techniques for self-performance at home, dedicated orthopedic supplies, available for purchase through an individual SpineTime profile).

Breakthrough innovation

MSK PRO App

Applications for professionals to synthesize, edit and exchange musculoskeletal Disorders information between professionals and patients

Unique database

REHApp collects huge amounts of data for analysis by the artificial intelligence engine of the REHApp system

Measurable SpineTime index

Diagnostic module finds the cause of pain, which allows to choose the most effective therapy.

Advantage of SpineTime method

It contains a scientifically and clinically proven objective self-examination element that is safe for the patients.

Simple handling

Scientifically proven method of assessing complicated dependencies of factors affecting experience of pain, requires user to answer just few direct questions and a few simple moves..

Personalised therapeutic protocol

Recommendations are selected from over 640 how-to videos, arranged in the right order. It verifies red flags, updating protocols as the state of patient's pain changes.

Area leaders

For a year now we have been delivering our project as a team below:

Robert Studziński, FRA

CEO

Originator, algorithms creator, physiotherapist, medical expert, runs the biggest physiotherapeutic clinic in Strasbourg, France. Key member of R&D teams (SOFTWARE & MEDICAL).

Andrzej Studziński, POL

COO

Physiotherapist, project manager, runs a medical clinic in Wrocław, Poland. Successfully implemented and set projects with national grants organisations (e.i. NCBR, PARP, DIP, PUP, etc.). Focused on working with orthopedic patients,

Jean-François Laugel, FRA

CFO

Chief Financial Officer, founded many start-ups (Gustoso.com, Voyages-sur-mesure.com, Xanadu Voyages...), A partner of consulting companies dealing with strategy and finance (A&F Conseil, Corporate Value Associates in Paris and Deloitte&Touche (Braxton).

Łukasz Pawik, POL

Chief Scientific Officer, PhD in physiotherapy, head of department of physiotherapy in dysfunctions of the locomotor system at Wrocław University of Health and Sport Sciences. Experienced in leading research teams.

Marek Sawicki, POL

IT and AI specialist; PhD in ML/AI methods with non destructive testing (NDT)

Marta Studzińska, FRA

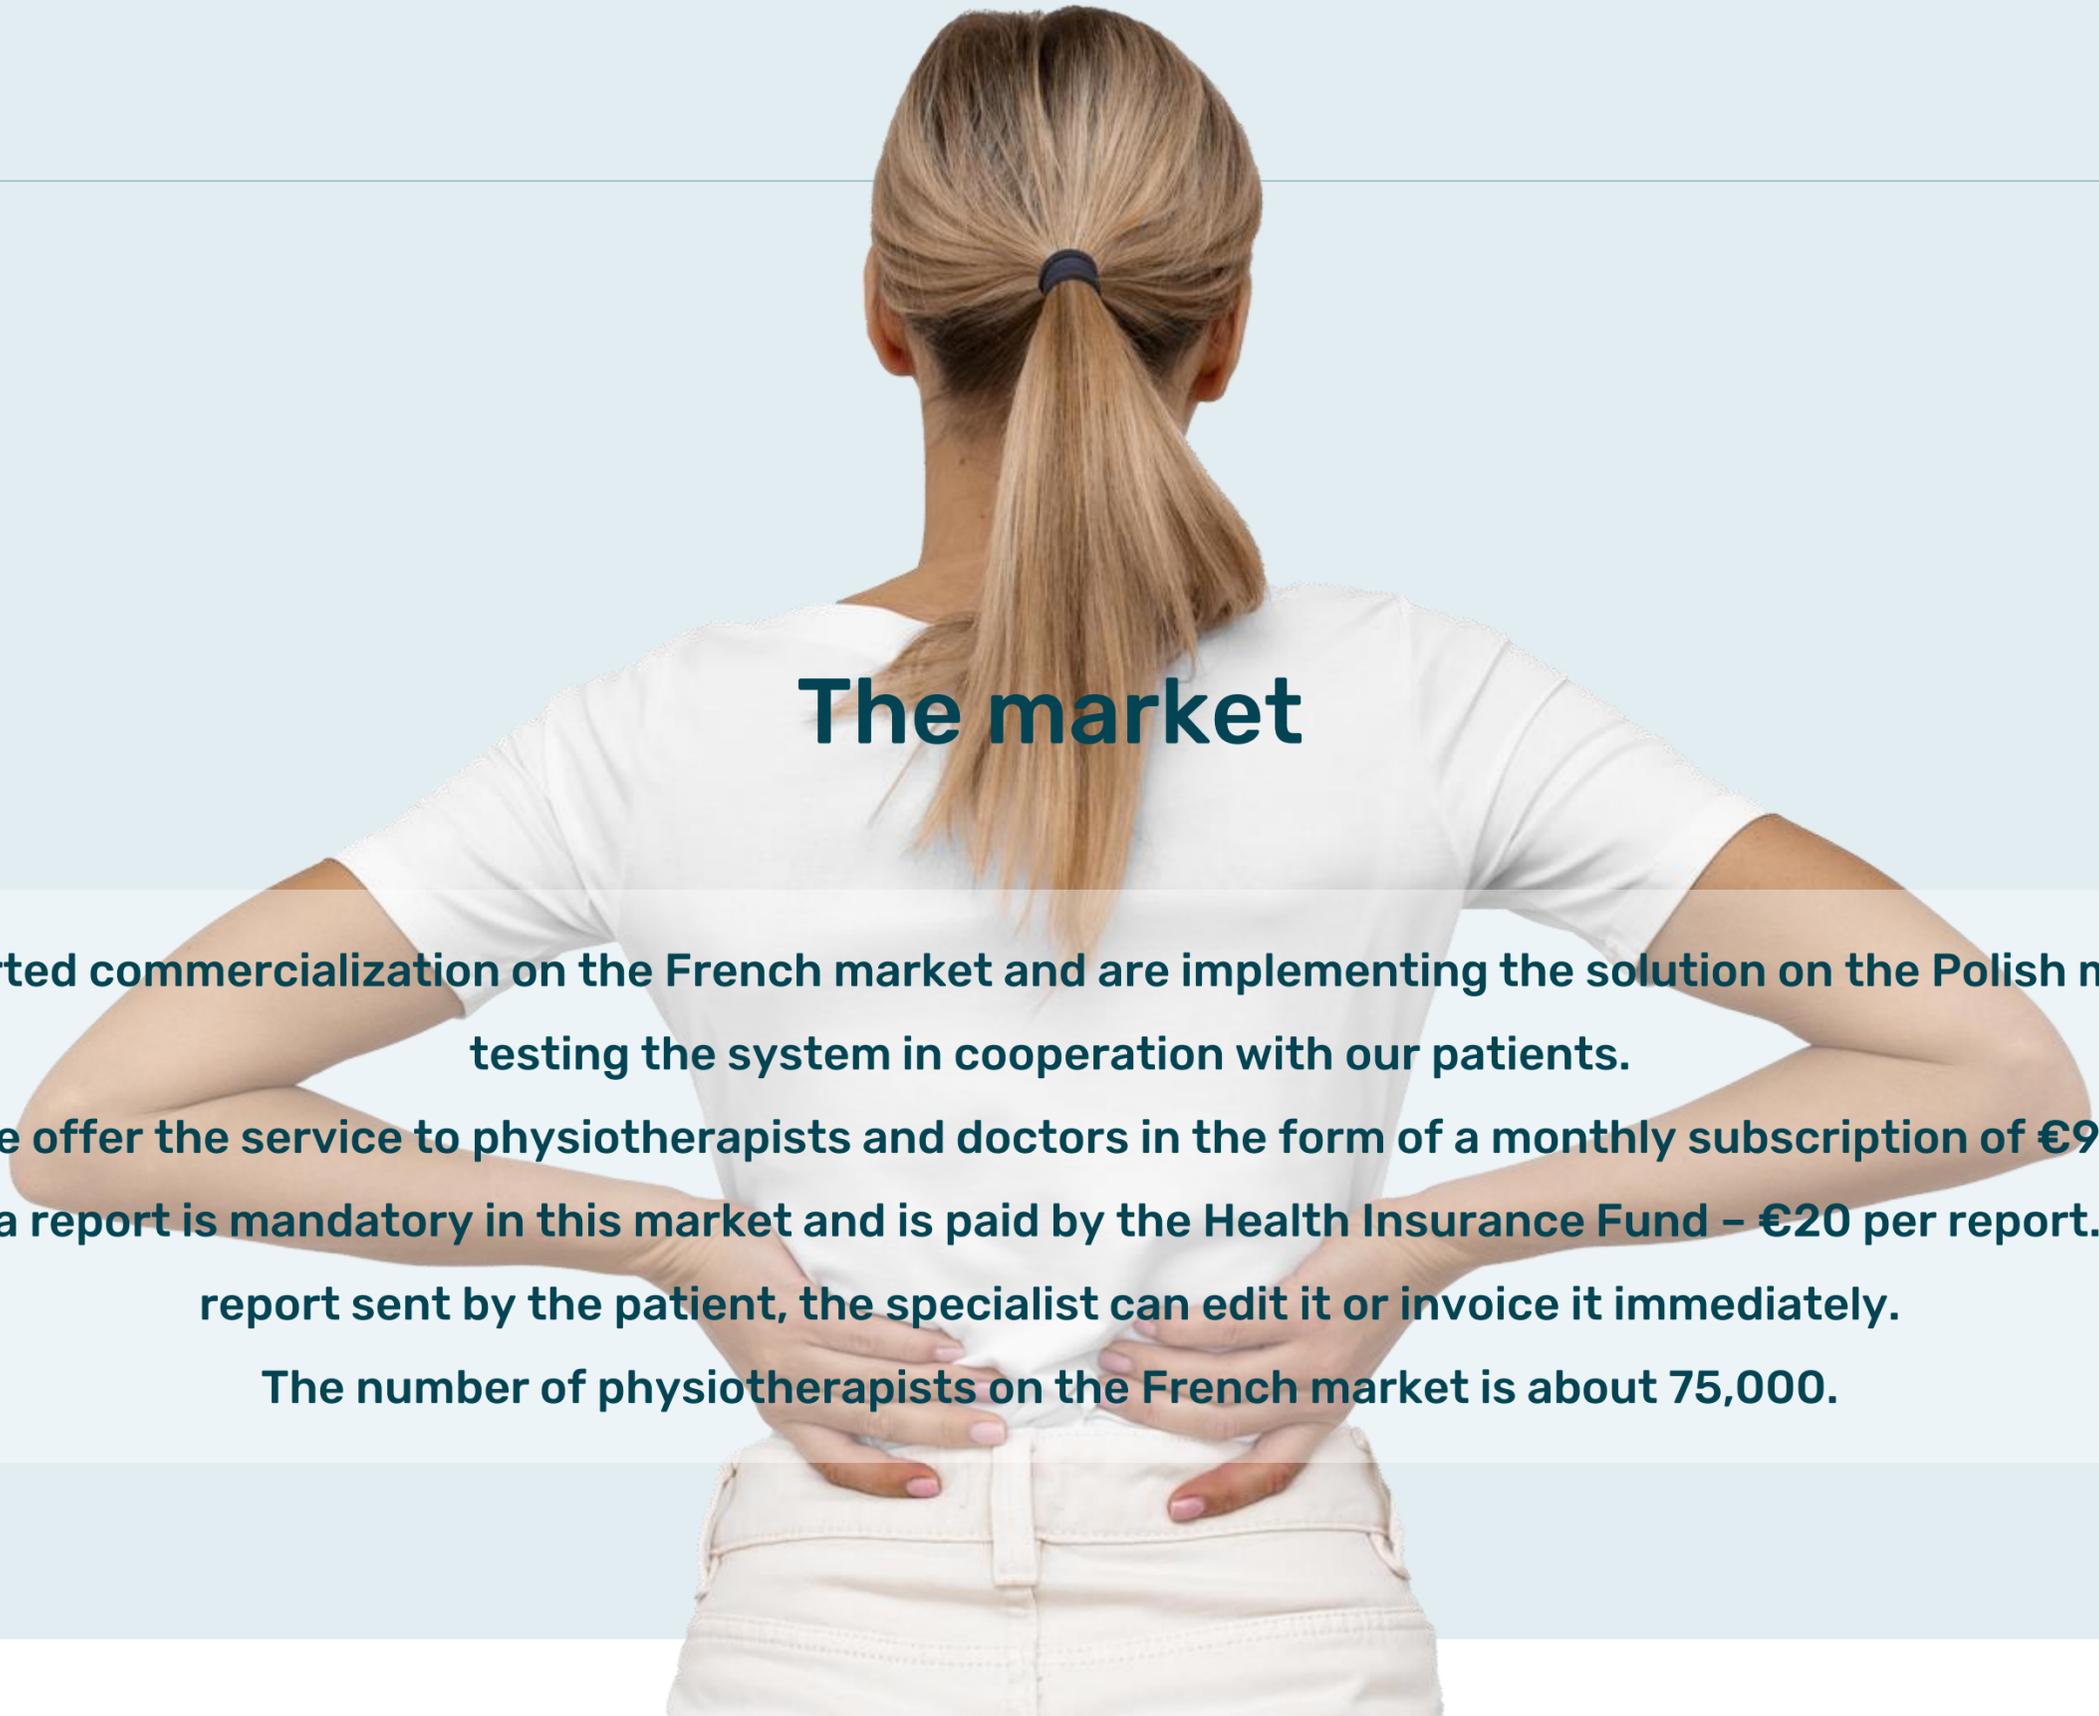

Therapeutic processes director, physiotherapist

Mateusz Szczukiewicz, POL

Experienced Technical lead, IT system architect expert, Front End specialist

Juliet Ogier-Denis, FRA

Digital expert, qualified movies director and editor

The market

We have already started commercialization on the French market and are implementing the solution on the Polish market, where we are testing the system in cooperation with our patients.

In France, we offer the service to physiotherapists and doctors in the form of a monthly subscription of €9.99 / month.

The preparation of a report is mandatory in this market and is paid by the Health Insurance Fund – €20 per report. After receiving the report sent by the patient, the specialist can edit it or invoice it immediately.

The number of physiotherapists on the French market is about 75,000.

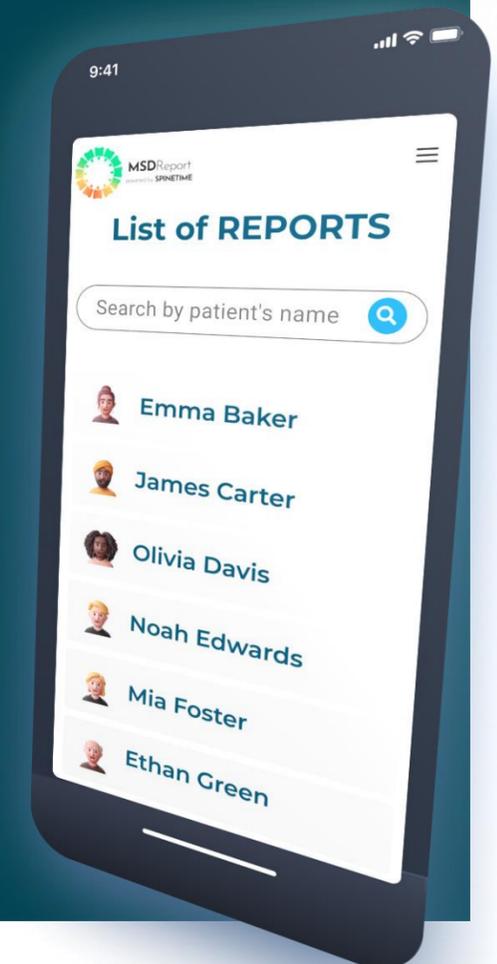

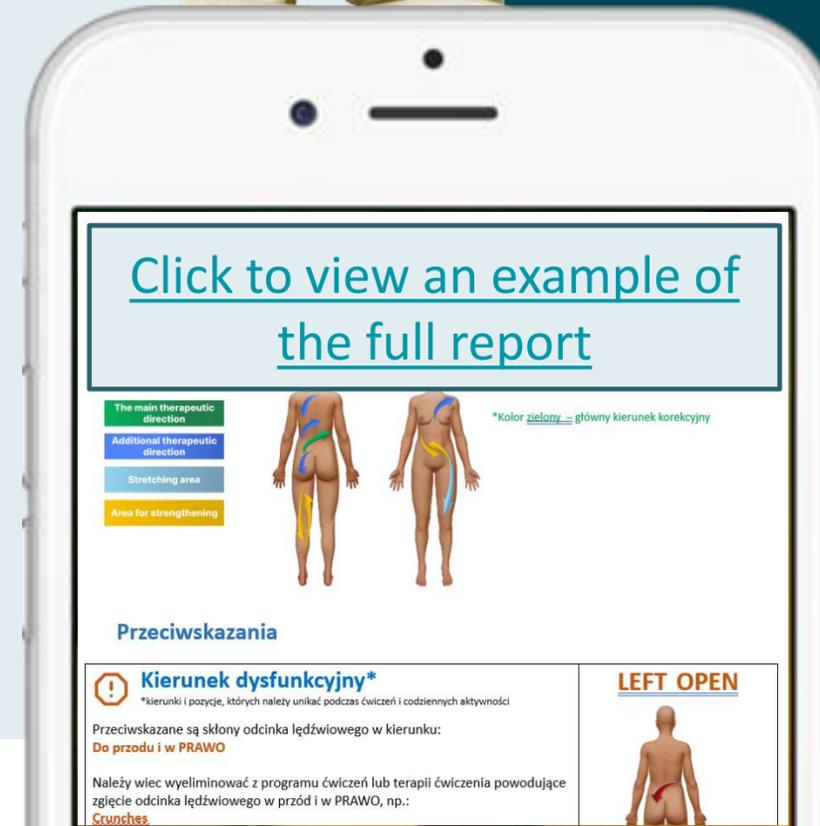

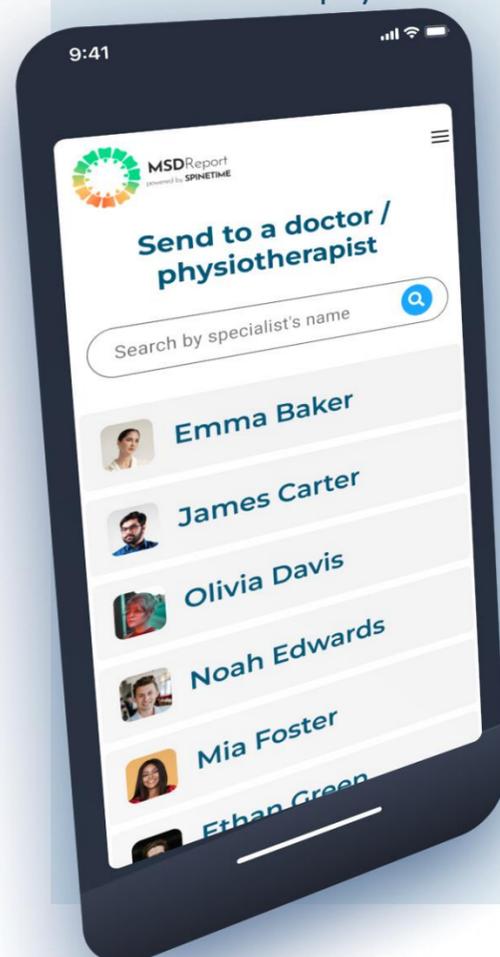

Synchronized diagnostic system for musculoskeletal dysfunction

What does the patient receive?

- Application for self-diagnosis and therapy of musculoskeletal disorders
- Be able to safely share your results with your doctor or physiotherapist.

What does a physiotherapist receive?

- Instant report on the patient's dysfunction status
- Ability to edit the report and exchange between specialists

Main competition on the global market

KAIA Health

<https://kaiahealth.com>

„Join over 500,000 people who have turned to Kaia for pain management“

When selecting exercises, the application only takes into account the subjective intensity of pain sensations at a given moment. No precise diagnosis. Does not eliminate risk factors (red flags).

SPINETIME parameters' advantages

Taking into account the main parameters (pain localisation, pain behavior depending on the surface/direction, subjective intensity of sensations and their dynamics, nature and source of symptoms, pain incident chronicity), considering red flags, the AI's ability to self improvement thanks to the users' feedback.

ADA Health

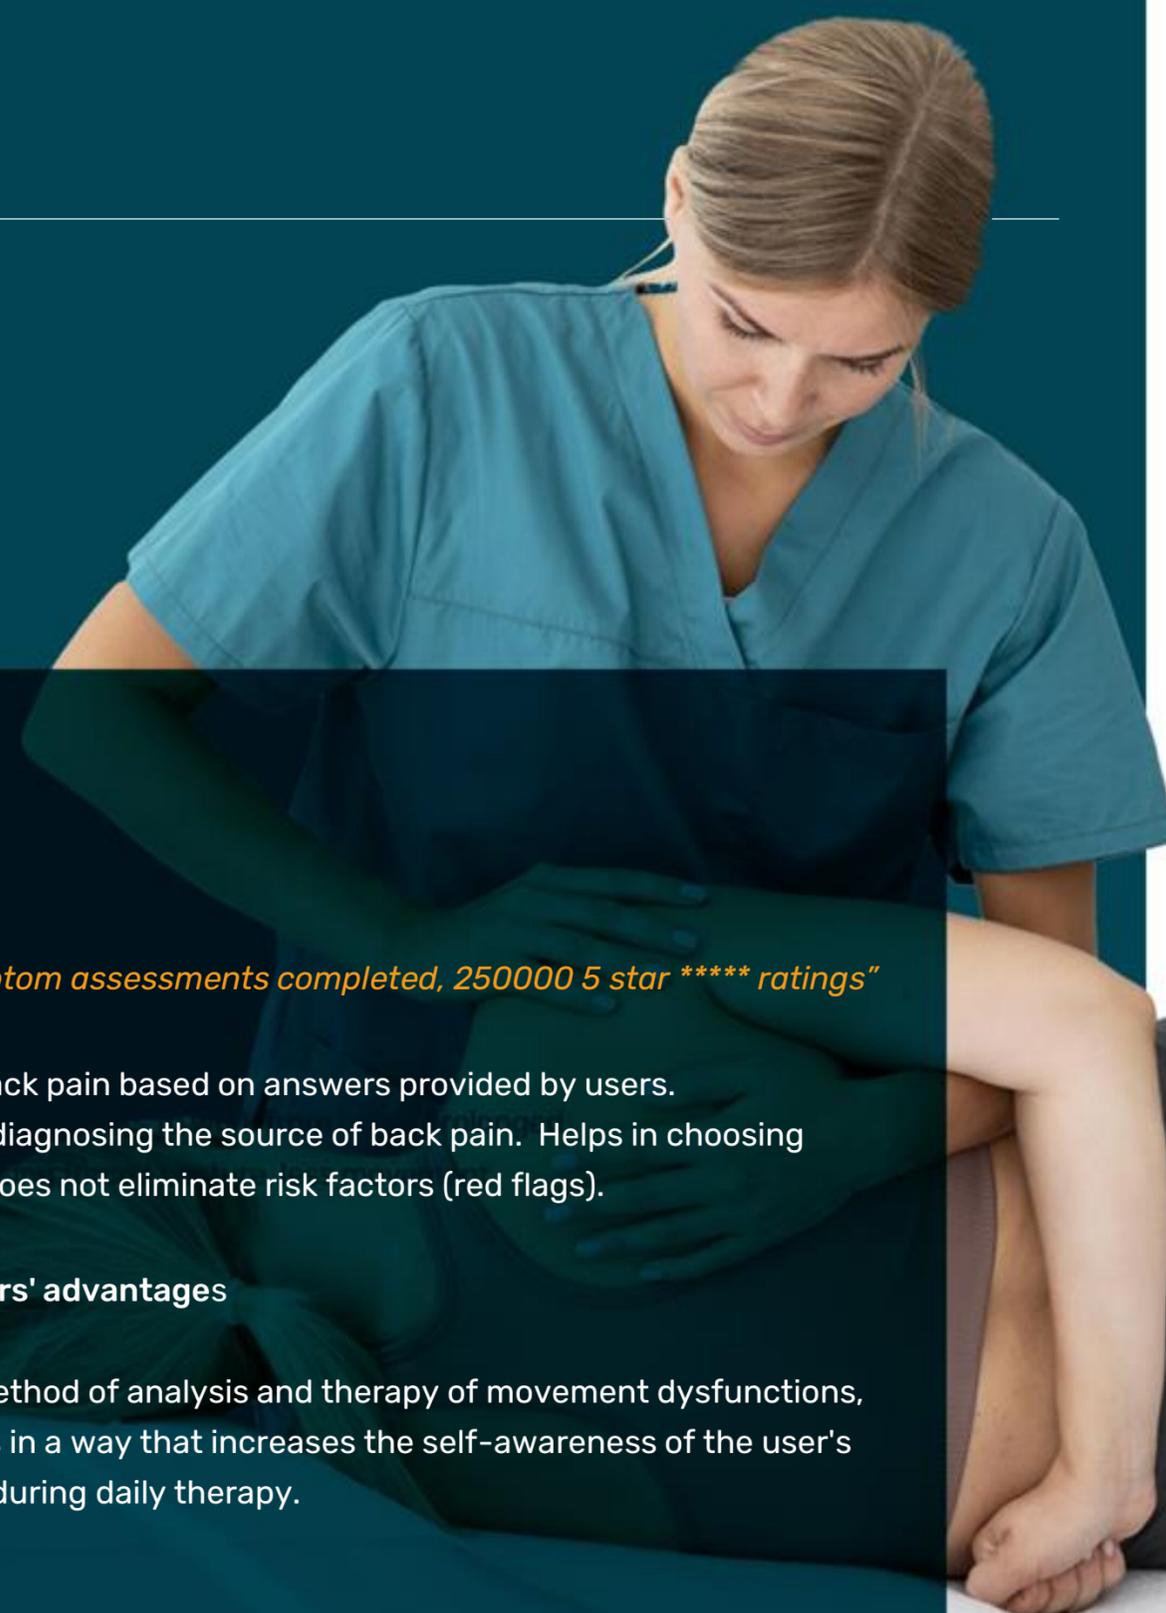

<https://ada.com>

*„10M users, 25M symptom assessments completed, 250000 5 star ***** ratings“*

Searches source of back pain based on answers provided by users. Low effectiveness in diagnosing the source of back pain. Helps in choosing a specialist to go to. Does not eliminate risk factors (red flags).

SPINETIME parameters' advantages

A medically proven method of analysis and therapy of movement dysfunctions, presenting the results in a way that increases the self-awareness of the user's body, accompanying during daily therapy.
Precise diagnosis.
Personalized therapy.
